

Exercise 2: Verifying Interactions

Ensuring a mocked method is called, using JUnit 5 + Mockito

1. ExternalApi.java (dependency to be mocked)

src/main/java/ExternalApi.java

```
public interface ExternalApi {  
    String getData();  
}
```

2. MyService.java (class under test)

src/main/java/MyService.java

```
public class MyService {  
  
    private final ExternalApi externalApi;  
  
    public MyService(ExternalApi externalApi) {  
        this.externalApi = externalApi;  
    }  
  
    public String fetchData() {  
        return externalApi.getData();  
    }  
}
```

3. MyServiceTest.java (verifying interaction)

src/test/java/MyServiceTest.java

```
import static org.mockito.Mockito.*;  
  
import org.junit.jupiter.api.Test;  
  
public class MyServiceTest {  
  
    @Test  
    public void testVerifyInteraction() {  
        // 1. Create a mock object  
        ExternalApi mockApi = mock(ExternalApi.class);  
        MyService service = new MyService(mockApi);  
  
        // 2. Call the method with specific arguments  
        service.fetchData();  
  
        // 3. Verify the interaction  
        verify(mockApi).getData();  
    }  
}
```
